EX 4

Create a prototype with familiar and unfamiliar navigation elements. Evaluate ease of use with different user groups.

I designed a prototype via Proto.io to merge established design patterns with experimental navigation, aiming to assess how different user segments interact with the interface. The project focuses on three core screens—Login, Home, and Profile—to deliver an accessible experience that simultaneously pushes the boundaries of traditional usability.

Familiar and Unfamiliar Navigation in UI/UX Design

- **Familiar Navigation** consists of widespread design conventions and interaction styles that users recognize instantly. These elements are highly predictable, ensuring a frictionless experience without the need for instructions.
    - *Examples:* Search inputs, header menus, action buttons (Edit/Save), and standard sign-in/sign-out prompts.
- **Unfamiliar Navigation** involves creative, non-traditional, or experimental features that break away from standard habits. While these can offer a more engaging experience, they often necessitate a brief learning phase for the user to become proficient.
    - *Examples:* Motion-triggered commands, parallax scrolling, and tucked-away or "hidden" navigation drawers.

Familiar Navigation Elements

- Utilized standard text entry fields for user credentials to ensure a recognizable sign-in process.
- Positioned the "Login" trigger directly under the credentials, following the expected visual hierarchy found in most apps.
- Integrated a straightforward "Edit Profile" option to provide users with a clear, effortless path to manage their personal data.

Unfamiliar Navigation Elements

- Employed advanced scrolling techniques, like parallax layers or lazy-loading content, which provide a modern feel but may surprise traditional users.
- Introduced gamification through visual progress indicators for profile setup, adding a motivational element rarely seen in basic account settings.
