EX 5 : Conduct task analysis for an app (e.g., online shopping) and document user flows. Create corresponding wireframes using Lucidchart

Task Analysis:

Task Analysis is the process of breaking down a user's interactions with the **Online Food Delivery Application** into smaller, manageable steps to understand how users order food efficiently. It helps in identifying user needs, difficulties faced during ordering, and opportunities to improve the overall experience.

In this system, the main goal of the user is to search for food, place an order, and receive delivery successfully.

Key Aspects of Task Analysis:

• Understanding what tasks users perform (e.g., browsing restaurants, selecting food, making payment).

• Identifying the sequence of actions required to complete a food order.

• Analyzing user pain points such as slow loading, payment failure, or difficulty in finding restaurants.

• Defining requirements to improve user experience, such as easy navigation, quick checkout, and live tracking.

User Flow

User Flow is a visual representation of how users navigate through the Online Food Delivery Application to successfully place and receive an order. It shows the step-by-step journey from opening the app to completing the order.

Key Aspects of User Flow:

• Represents decision-making paths (e.g., What happens if the user adds more items? What if payment fails?).

• Maps alternative navigation options (e.g., Browse categories or Search directly).

• Shows how users move between screens such as Home, Menu, Cart, Payment, and Tracking.

User Flow for an Online Food Delivery Application

Start → Open App → Login/Register → Select/Confirm Location → Browse Restaurants → Search Food → View Menu → Select Food Item → Customize Item → Add to Cart → Review Cart → Apply Coupon → Proceed to Checkout → Select Payment Method → Payment Confirmation → Order Confirmation → Live Tracking → Order Delivered → Rate & Review

User Flow for an Online Food Delivery Application

Step 1: Start

• The user opens the food delivery application.
• The welcome screen is displayed.

Step 2: Login or Register

• Existing users log in using credentials.
• New users create an account to continue.

Step 3: Select or Confirm Location

• The user confirms or enters the delivery address.
• Restaurants available in that area are displayed.

Step 4: Browse Restaurants

• The user explores different restaurants and food categories.
• Offers, ratings, and delivery time are shown.

Step 5: Search Food

• The user can search for a specific dish or restaurant.
• Search results are displayed instantly.

Step 6: View Menu

• The user views detailed menu items with prices and descriptions.

Step 7: Select and Customize Food Item

• The user selects a food item.
• Customization options such as toppings, quantity, and notes can be added.

Step 8: Add to Cart

• The selected item is added to the cart.
• The user can continue shopping or proceed to checkout.

Step 9: Review Cart

• The cart displays selected items, quantity, subtotal, taxes, and delivery charges.

Step 10: Apply Coupon

• The user enters a promo code to receive discounts (if available).

Step 11: Proceed to Checkout

• The user confirms order details before payment.

Step 12: Select Payment Method

• The user chooses between Online Payment or Cash on Delivery (COD).

Step 13: Payment Confirmation

• For online payment, the system verifies the transaction.
• A success message is displayed.

Step 14: Order Confirmation

• The system shows order summary and estimated delivery time.

Step 15: Live Tracking

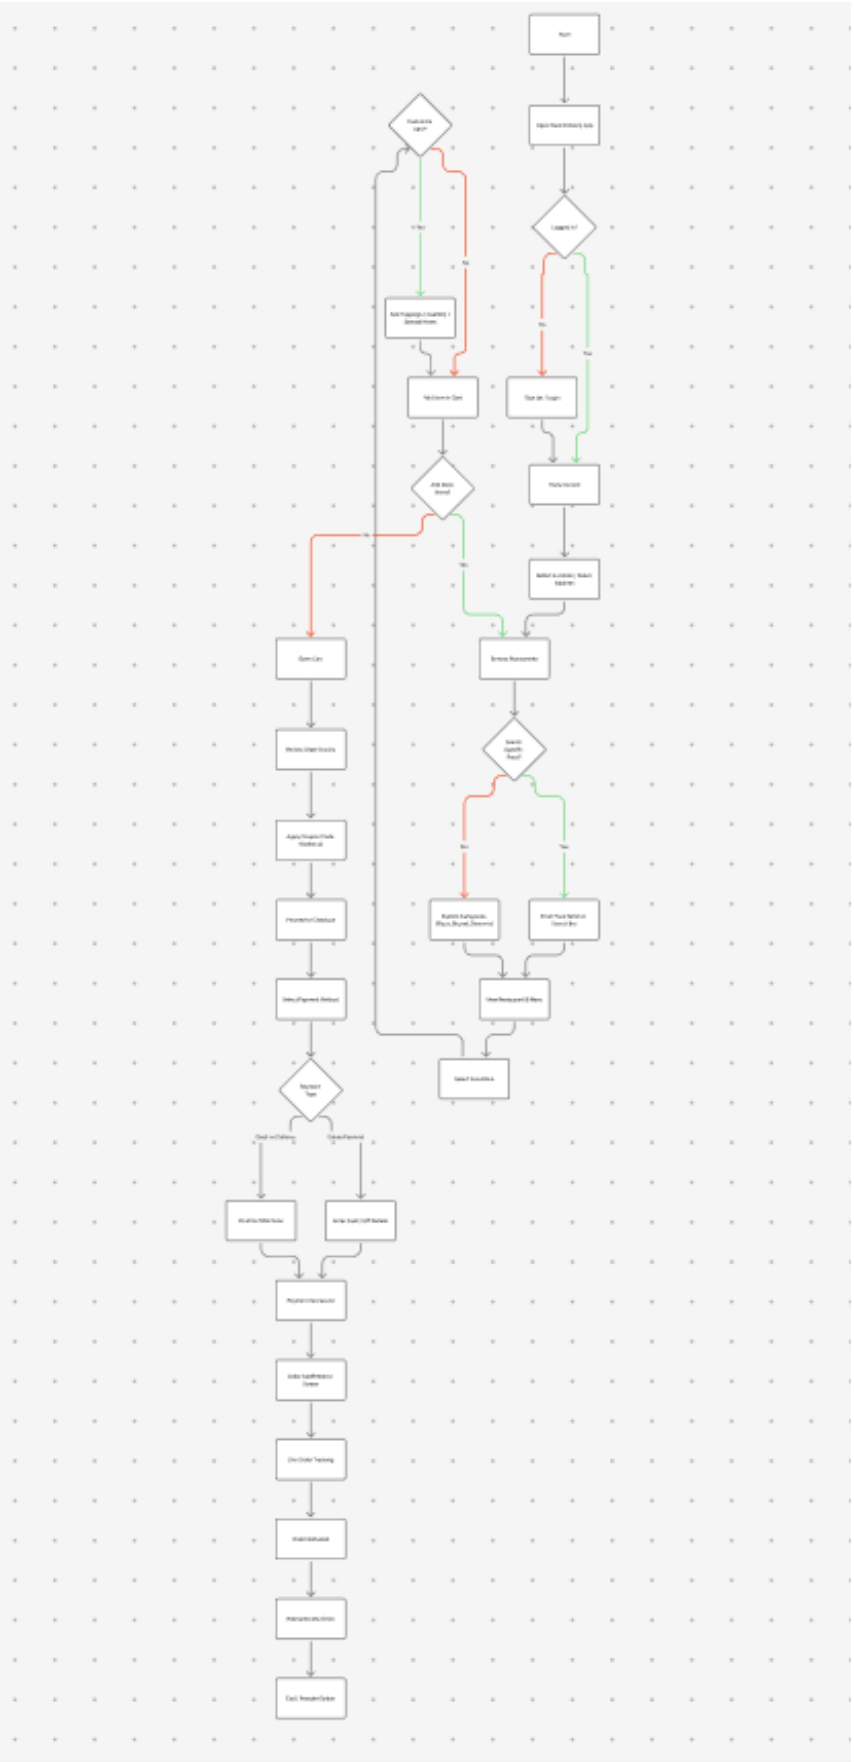
• The user tracks order status (Preparing, Out for Delivery).

Step 16: Order Delivered

• The food is delivered to the user's address.

Step 17: Rate and Review

• The user provides feedback and ratings.

Step 18: End of Process


- The order process is successfully completed.
- The user can reorder or exit the application.
