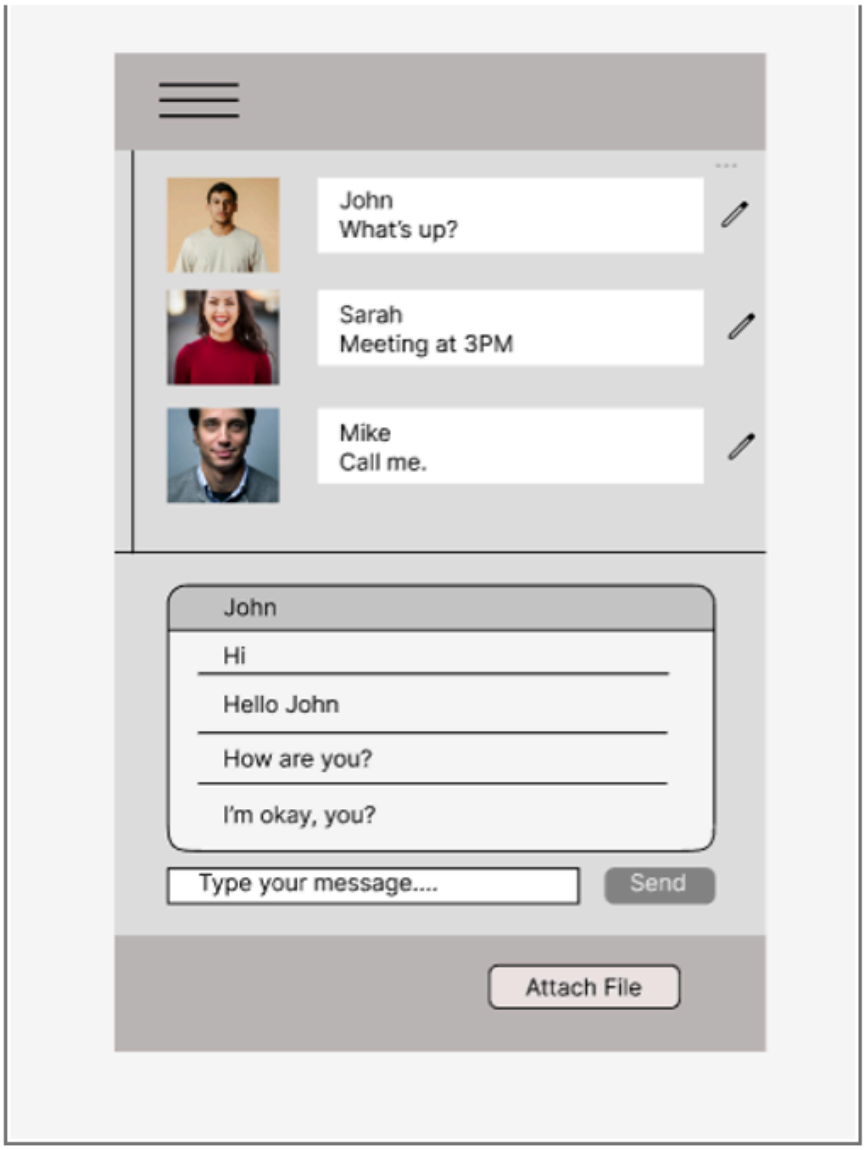
ASSIGNMENT-7
USER INTERFACE DESIGN

-240701556
M TARUN ANTONY

INITIAL WEBSITE:

Please give a feedback on my website

FEEDBACK FORM BY THE USERS:



The first one gets the job done, but it looks more like a basic draft or wireframe. It's a bit plain and doesn't really feel like a modern chat app. The layout is also a little stiff, and it takes a bit more effort to scan through messages.

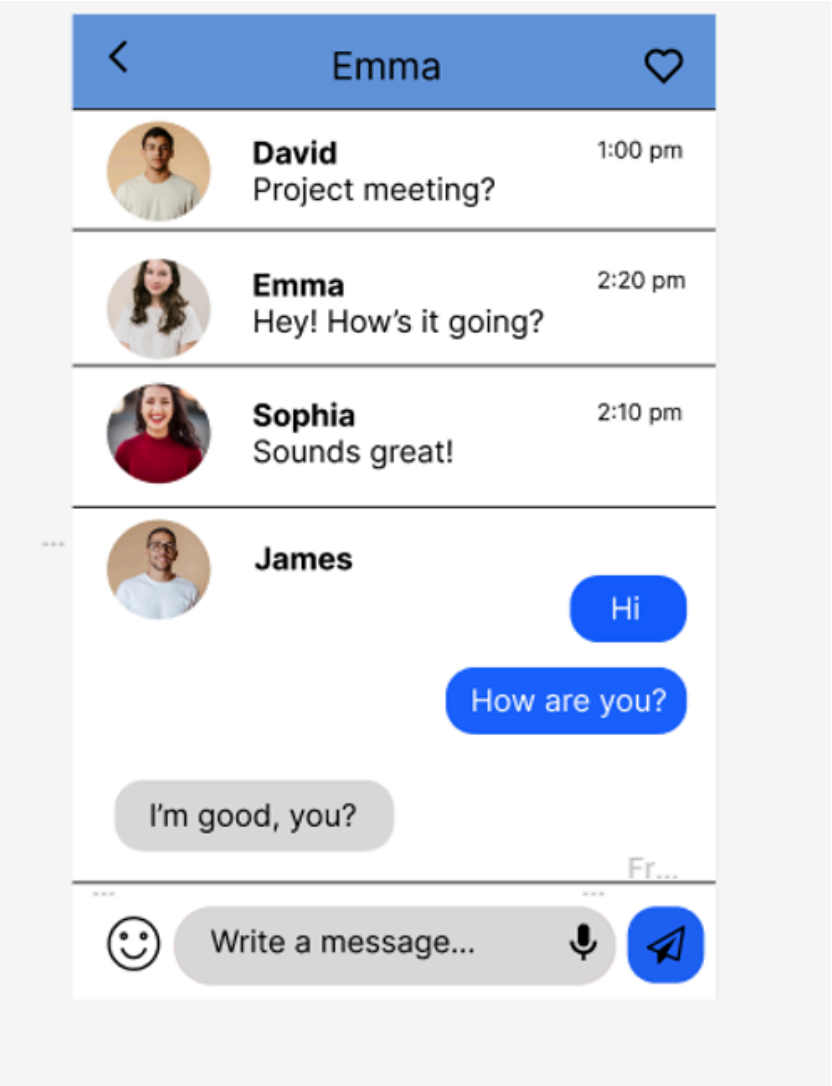
USER'S OPINION

You can frame it like this from a user's perspective:

“From a user’s point of view, the first design feels very basic and unfinished, almost like a draft rather than a final product. It looks quite plain and doesn’t give the feel of a modern chat application that users are familiar with. The layout also feels a bit rigid, which makes it slightly harder to quickly scan and read through messages. Overall, it works, but it doesn’t feel very smooth or engaging to use.”

THE ALTERED WEBSITE ACCORDING TO USER’S FEEDBACK:

“From a user’s point of view, the updated design feels much more natural and familiar, similar to other chat apps they already use. The cleaner spacing makes everything easier to read, and the profiles and names stand out more, so it’s quicker to recognize who is talking. The timestamps also help users understand the flow of the conversation at a glance. The chat bubbles are especially helpful, as they make it much easier to follow messages compared to the simple text layout in the previous design. Overall, it feels smoother and more intuitive to use.”



The updated version feels way more natural and familiar. The spacing is cleaner, the profiles and names stand out better, and the timestamps help you quickly understand what's going on. The chat bubbles make a big difference too—it's much easier to follow the conversation compared to the simple text lines in the first one.
